## IMPORTANT SAFETY INSTRUCTIONS

1. Read these instructions
2. Keep these instructions.
3. Heed all warnings.
4. Follow all instructions.
5. Do not place any product referred in this manual long-term in the extreme environment
6. Install in accordance with the manufacturer's instructions.
7. Use accessories only specified by the manufacturer.
8. Refer all servicing to the qualified service personnel. Servicing is required when the product has been damaged in any way, such as handle or mortise is damaged, product has been exposed to rain or moisture, does not operate normally.

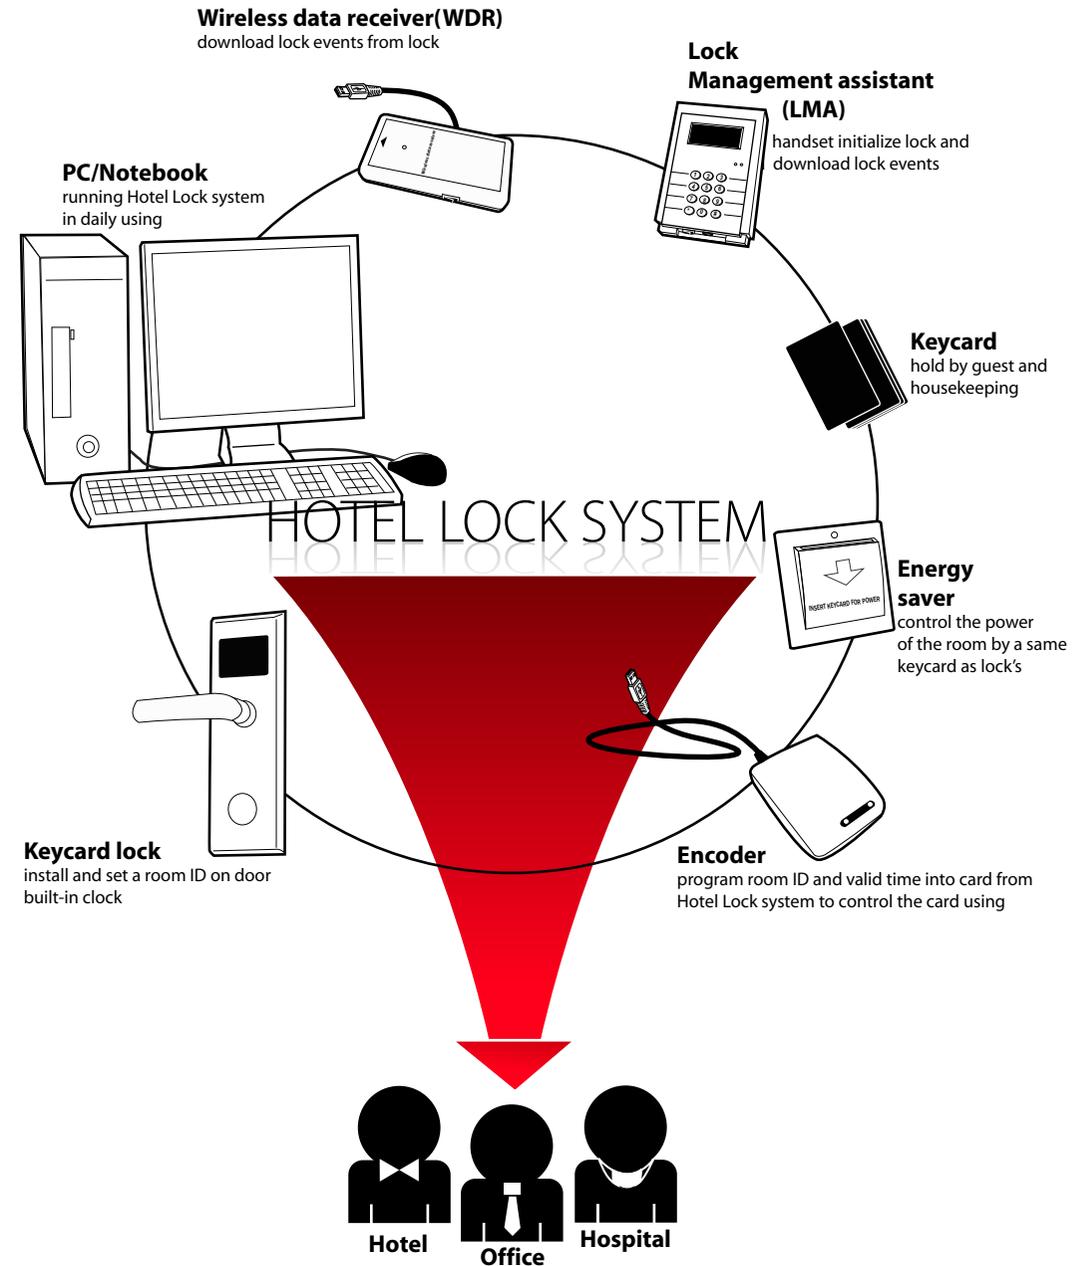

## INTRODUCTION

Congratulations on your selection of Hotel Lock System. This is a solution that carry out a modern, efficient and safe management of the rooms in hotel, school, office, apartment, hospital by application of hardware and software.

Before using the instrument, be sure to carefully read through the instructions contained in this manual. Please keep all information for future reference.

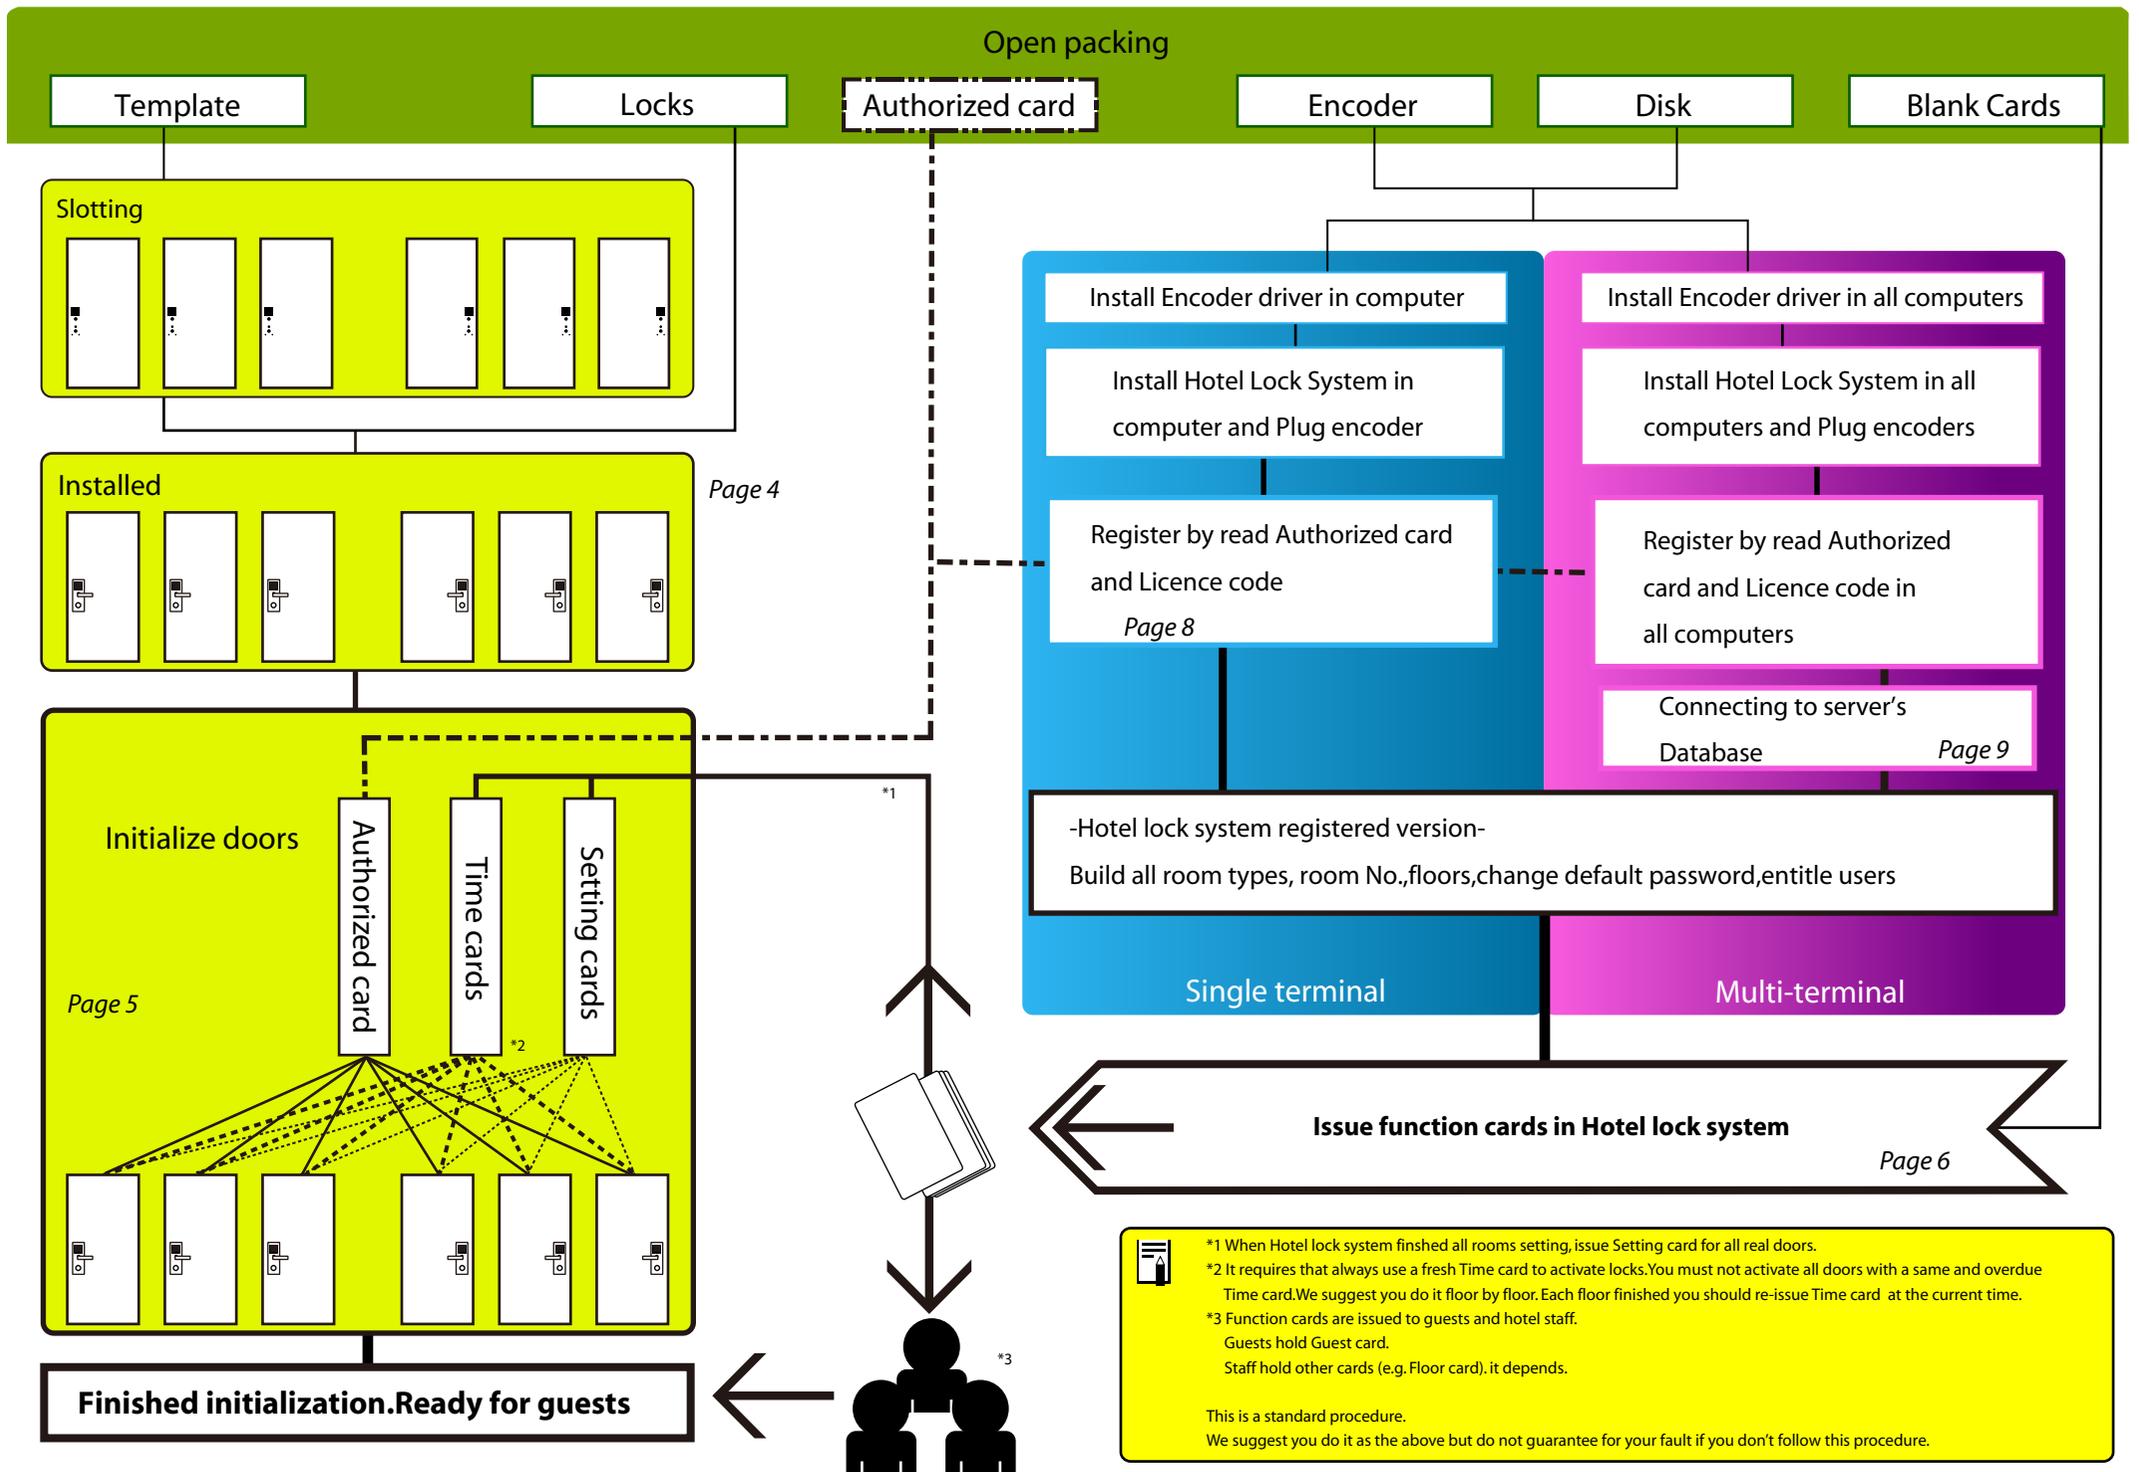

## KEYWORDS

- 1. Battery**  
Lock requires AA batteries x4pcs to provide power keeping daily using. Alkaline battery is prefer. Should the AA batteries go dead, the door can't be operate agin. Emergency key is the only way release its locking status.  
We recommend the high capacity battery whose life can reach 10-12 months but we don't promises any battery's life.  
Battery box install in reverse will cause mainboard destroyed.
- 2. Software error.**  
Hotel system requires run on Windows 98/XP/2003  
A tiny difference of the OS including language, service pack and any other fault in OS itself may cause a error.  
We reserve the right explain it, revise it not notify you.
- 3. Card read error.**  
Pcb board inside lock is responsible for reading keycards which is in good condition at most status.  
Please pay attention to the feedback of 1) light 2) warning sound 3) tongue 4) motor sound 5) handle from lock.

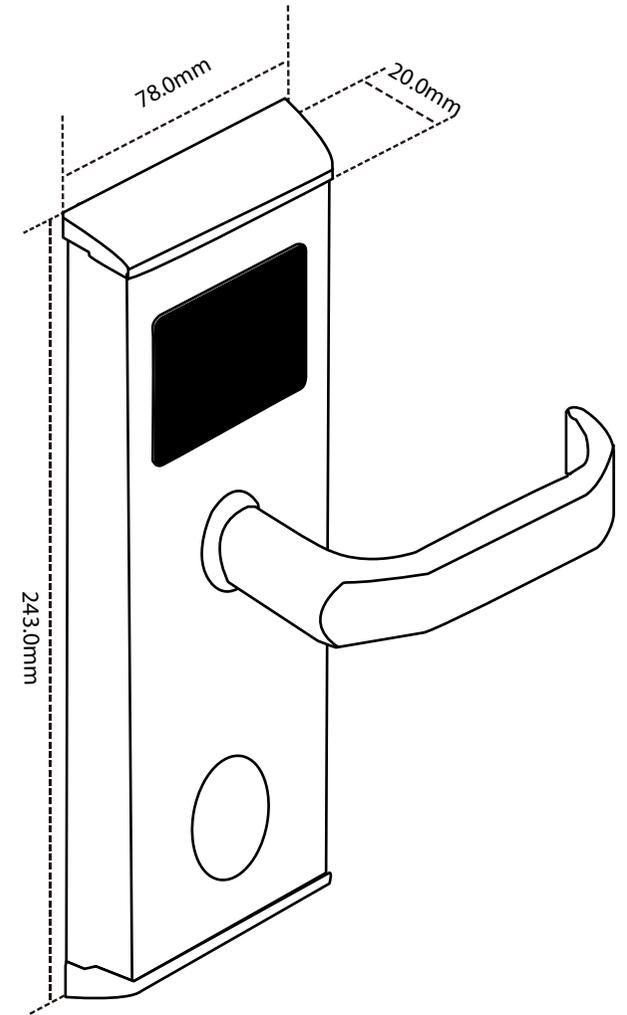

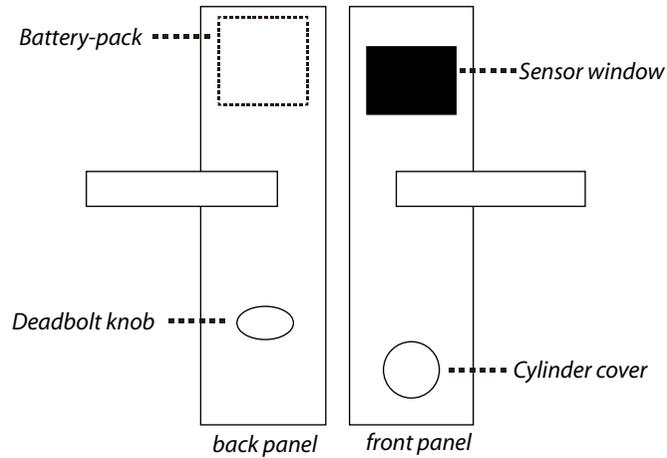

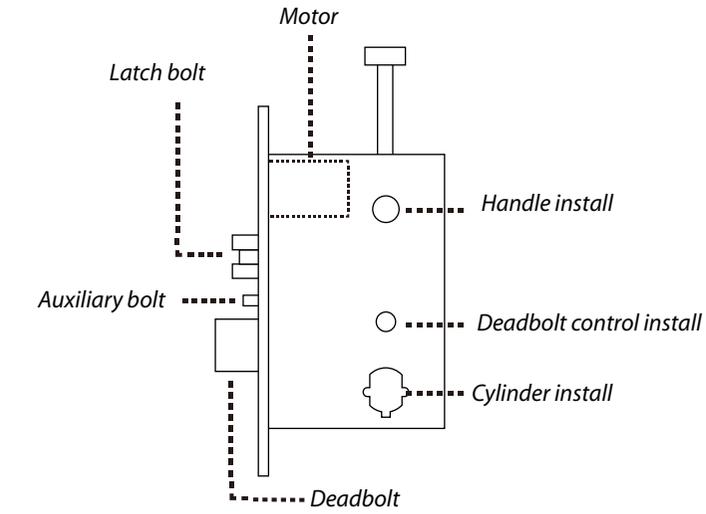

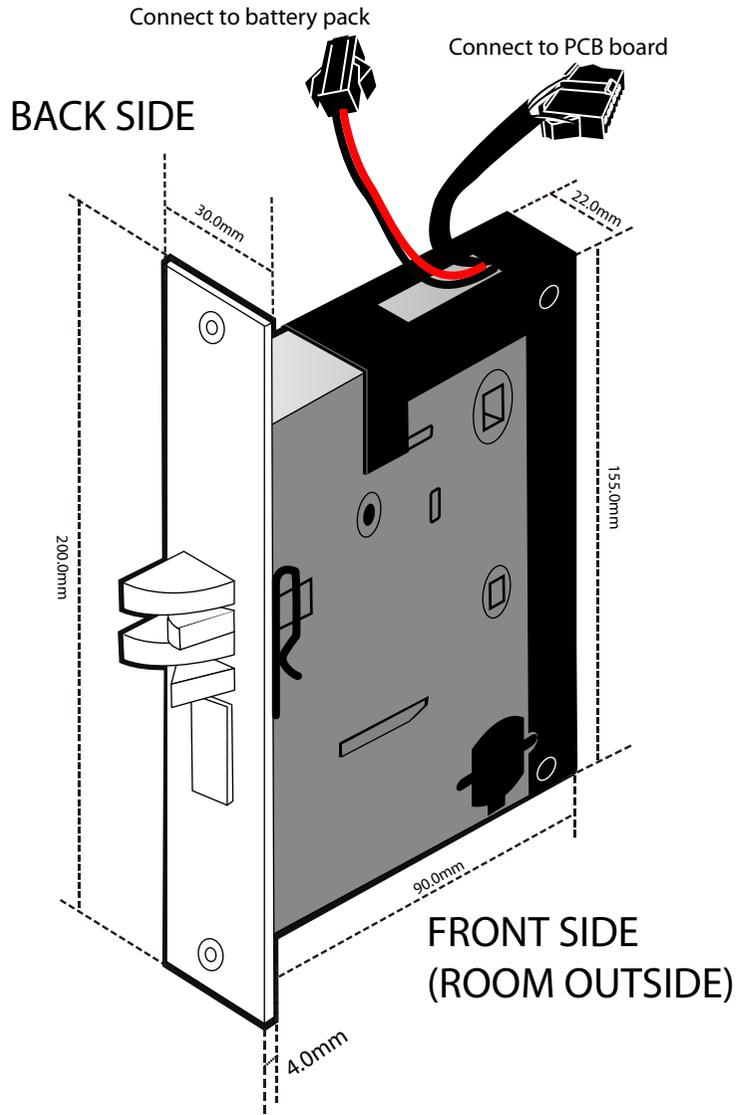

This system is widely suitable for hotel, office and hospital

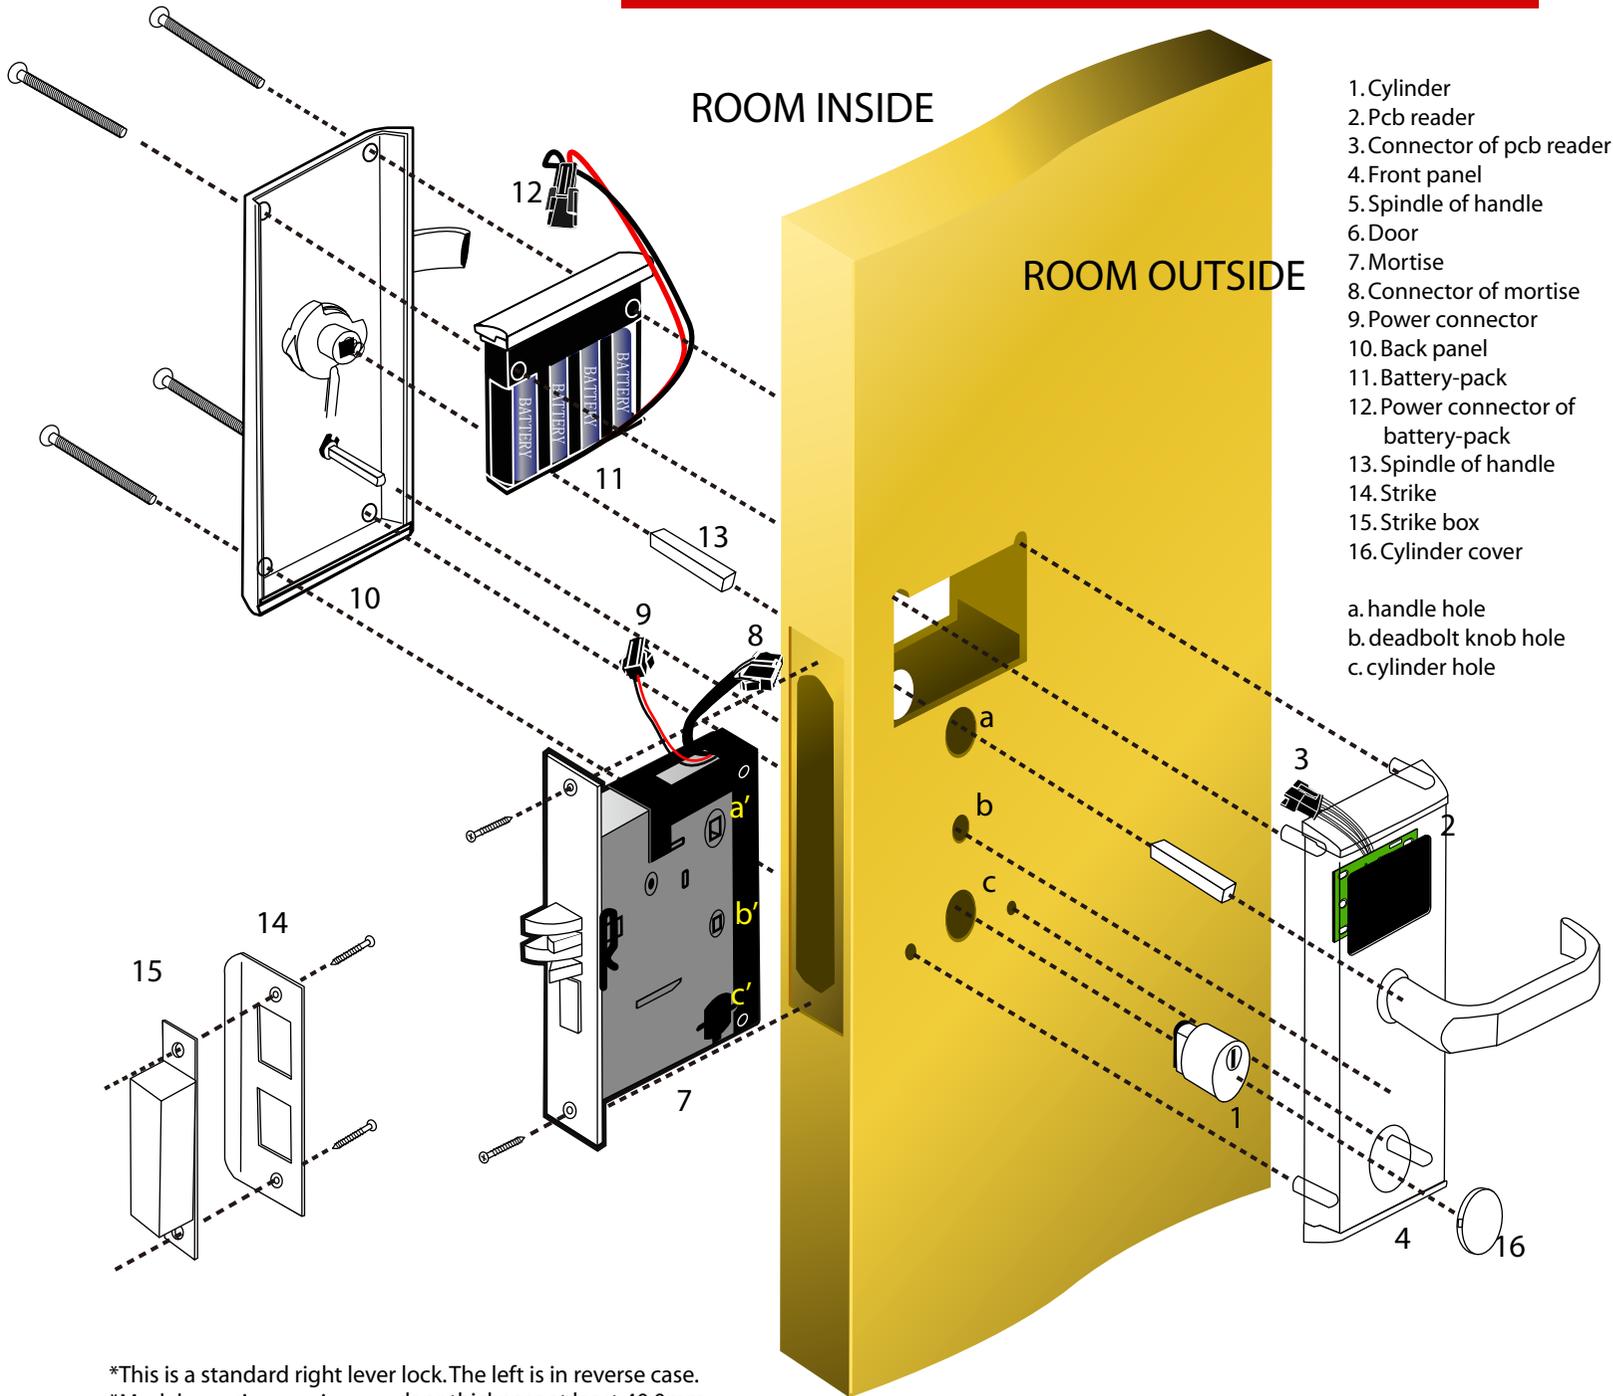

# Procedure

# Mortise&Panel

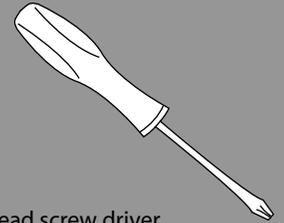

# Lock Install

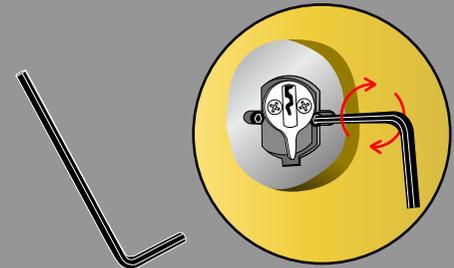

1. Cylinder
2. Pcb reader
3. Connector of pcb reader
4. Front panel
5. Spindle of handle
6. Door
7. Mortise
8. Connector of mortise
9. Power connector
10. Back panel
11. Battery-pack
12. Power connector of battery-pack
13. Spindle of handle
14. Strike
15. Strike box
16. Cylinder cover

- a. handle hole  
 b. deadbolt knob hole  
 c. cylinder hole

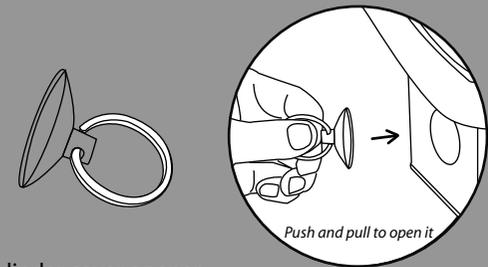

## TOOLS

Cross-Head screw driver  
 An ordinary tool and should be prepared by user

Inner hexagon screw driver  
 This tool is necessary while install cylinder in mortise.  
 Manufacturer offer it free

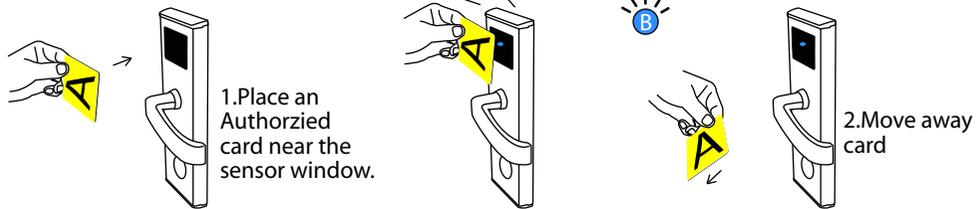

Cylinder cover opener  
 This tool is used to open the cylinder cover to let emergency key insert.  
 Manufacturer offer it free

\*This is a standard right lever lock. The left is in reverse case.  
 \*Model mortise requires, door thickness at least 40.0mm.  
 \*For other thickness door please contact with us seeking other mortise solution  
 \*Right for the hardware configuration changes without notice is reserved.

# Initialize lock

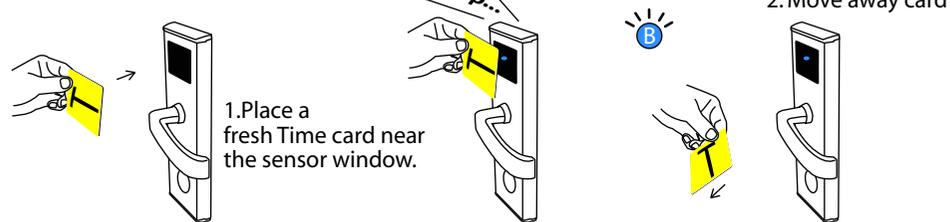

## Initialize-STEP 1 Set hotel code

Each brand new lock should be initialized as the following 3 steps after they had been installed on the door. Since when the lock been initialized it has the ability identify the keycards issued by Hotel lock system which is registered by the same Authorized card.

You don't needs do the above again in daily using unless the lock ready to moved to another hotel. Different hotel should use different hotel code(Authorized card saves hotel code info)

## Initialize-STEP 2 Activate clock

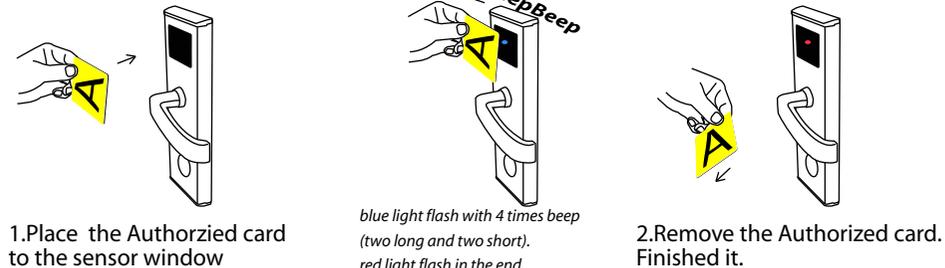

Time card should be issued in Hotel Lock System. It should be in fresh time which same as the current real time. You can not use a yesterday issued Time card or even many minutes ago's because the clock of lock should always run at same or near as the real time. To reduce the error between clock of lock and the real, we suggest 1 fresh Time card do set 1 floor rooms only. After finish 1 floor you should issue another fresh. Or you can do adjust the 'Setting time' at a time several minutes ahead of the real when you issue it in Hotel Lock System. Then you can do floor by floor by changing a fresh Time card.

## Initialize-STEP 3 Set room ID

Setting card should be issued in Hotel Lock System. It should be 1 pc for 1 room because it saves 1 room ID only. We suggest you issue all rooms at one time and mark on each card room ID.

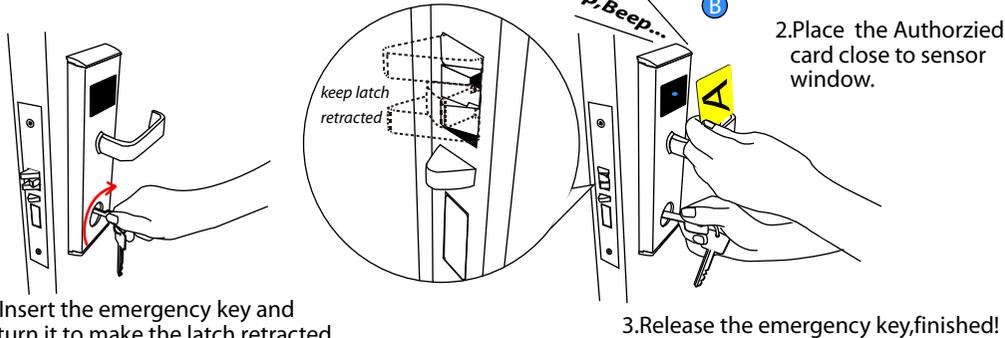

## Revoke hotel code

Function-Since the hotel code been revoked, the lock can't identify any function cards. It will show 1 time red light (page 11)

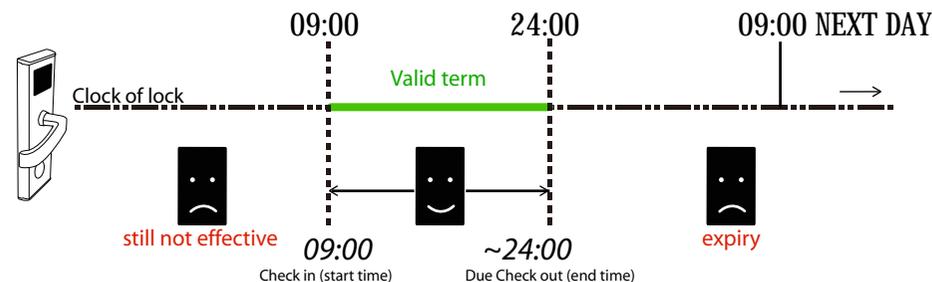

Actually the revoke hotel code action is same as initialize STEP 1 but reverse result. It is cycle working. One time read set and next time read to revoke. Revoke hotel code will be succeed only by using the same Authorized card which was did set hotel code before time.

## FORCE set hotel code

Force set hotel code should be considered when initialize set hotel code (read Authorized card) failed. Also you can do force set hotel code as STEP 1 because it is same final effect as normal initialize STEP 1 (read Authorized card).

## How can lock knows the card in valid term or not?

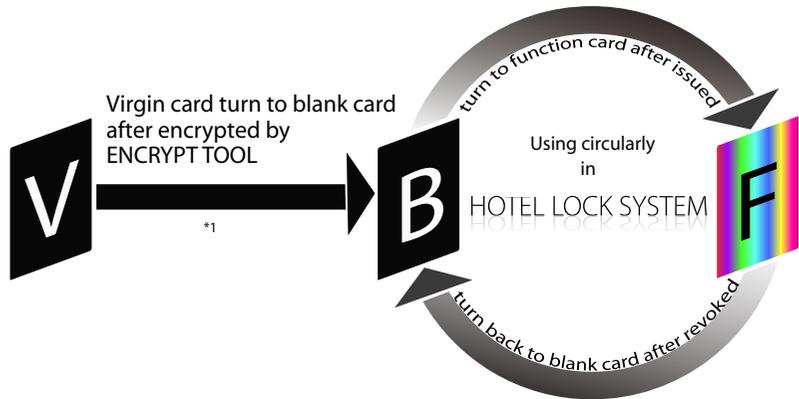

# Explanation of cards

**V Virgin card**  
*Brand new RFID(Mifare 1/IC)card.  
 Not only brand new but also old including free sector useable for M1 cards.*

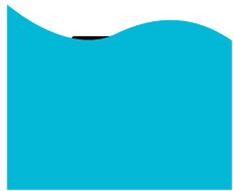

**B Blank card**  
*Ready to be issued to function cards.  
 Blank card is a range of the cards without issued after been encrypted.*

**F Function card**  
*including all card types with different functions in Hotel Lock System.  
 They are issued and revoked able(Except Authorized card).*

**No high temperature**

*Keycard is made of plastic which will melt down in high temperature.*

**No long term dunk in water**

*Long term dunk in water will cause inner data lost*

**No overexert bend**

*Once card was broken, it can't recover again.*

**Keep the keycard clean and use it in correct way.**

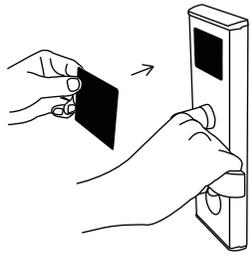

\*1. Manufacturer will encrypt cards for user or offer user the encrypt tool.

Authorized card *2	×	×	×	Register Hotel lock system. Initialize and revoke initialize locks.Manufacturer offers. One hotel hold 1pc
Function card	unlock normal locking	unlock a group locks	unlock dead bolt	function
Time card	×	×	×	Activate clock built-in locks and energy saving switch when initialize it. New installed locks read ONCE.
Room Setting card	×	×	×	Set rooms' (common doors) ID on the locks when initialize it. New installed read ONCE/lock.
Check-out card	×	×	×	Force revoke the current guest card on the room.
Data startup card *3	×	×	×	Boot in the lock events download device/card.
Guest card	○	×	×	Unlock locks in a limited time. Guest hold.
Floor card	○	○	×	Unlock all locks in a certain floor. Max 4 random floors in 1 card. Using time limit able
Area card	○	○	×	Unlock locks in a same customized area. Max 4 random areas in 1 card(area range required defined when build rooms). Using time limit able
Building card	○	○	×	Unlock all locks in a certain building. Max 1 building in 1 card. Using time limit able
Master card	○	○	○	Unlock all locks including dead bolt. Using time limit able.
Passage card	○	○	○	Unlock all locks and make it into passage mode which allows unlock without card. Using time limit able.
Emergency card	○	○	○	Unlock all locks and make it into passage mode. Using time limit able.
Loss-report card	×	×	×	Revoke keycard which lost by chance.

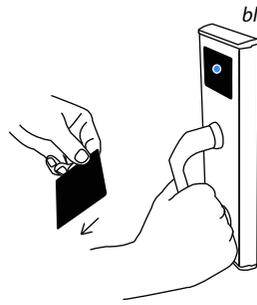

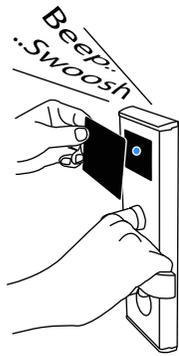

\*2. Each Authorized card has a unique 8 digits hotel code.

\*3. RFID(mifare 1)Data startup card is specially used to boot device WDR(wireless data receiver) and LMA (lock management assistant). IC Data startup card is specially used to boot Query card which saves lock events.

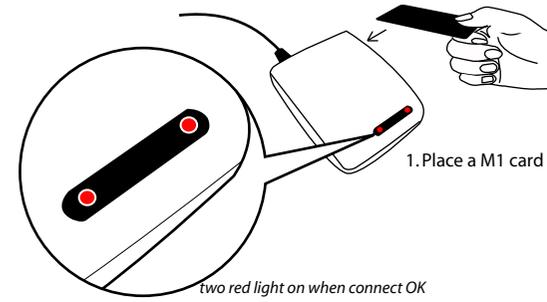

# Basic Action

1. Place a M1 card near to the sensor window

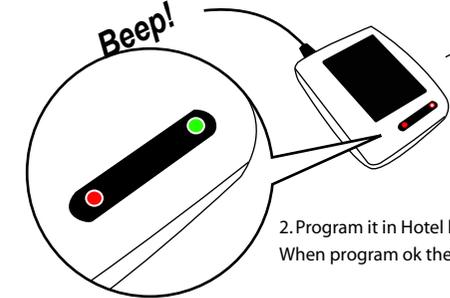

2. Remove card and shake the handle.  
blue light flash

1. Place a M1 card onto the encoder.

two red light on when connect OK

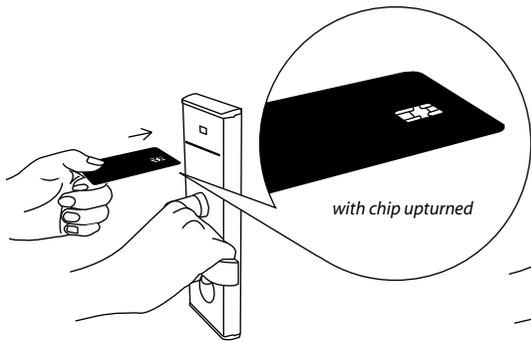

3. Take away card

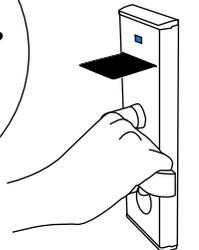

2. Program it in Hotel lock system.  
When program ok there will be beep sound.

right light flash green when programming

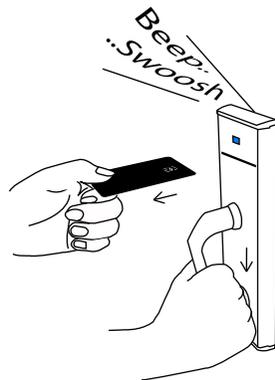

## ● Open lock

1. Insert IC card with chip upturned.

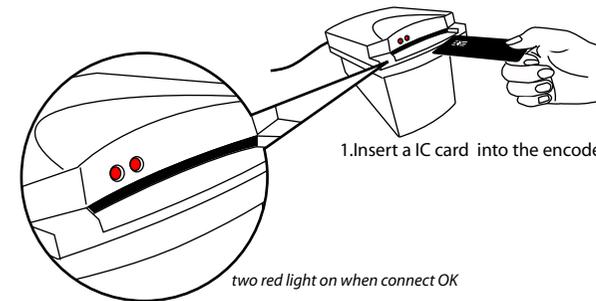

blue light flash continuous

2. Pull out of card, the blue light keep on. Shake the handle before the light die.

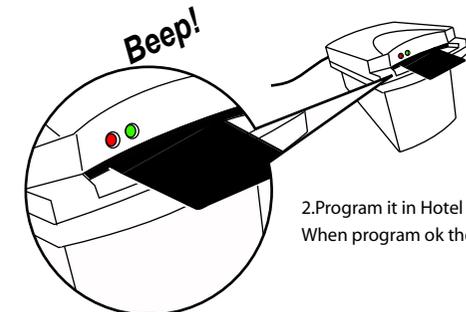

## ● Encode keycard

1. Insert a IC card into the encoder.

two red light on when connect OK

3. take away card

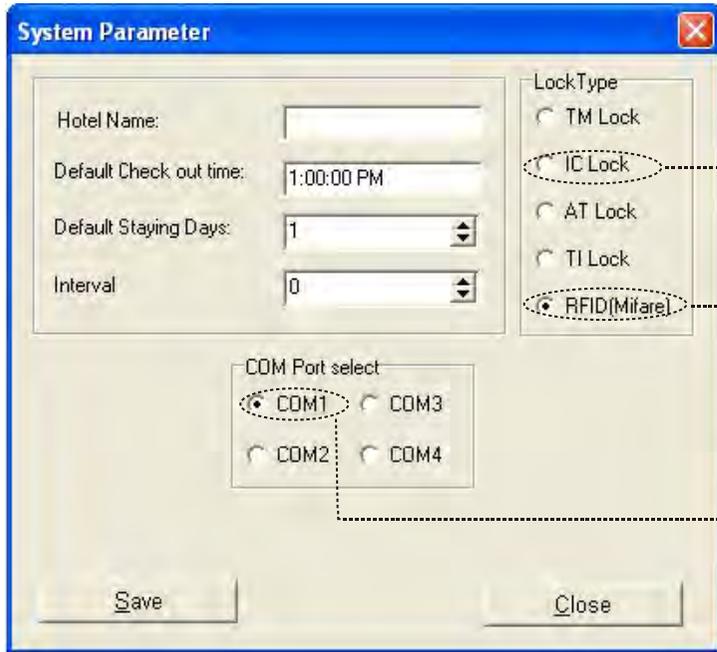

2. Program it in Hotel lock system.  
When program ok there will be beep sound.

right light turn to green after insert card

# Register Software

1. Login system with User- SYSTEM, Password- 0 (zero)

2.  System setting > System parameter

IC card(SLE4442)  
hotel lock

RFID card(Mifare 1K)  
hotel lock

Choose the correct lock type.  
e.g.It is 'Mifare' here.  
Click 'Save' and 'close'.  
It exit automatically.

Skip it when encoder is USB port

 Fill your hotel name and adjust the default check out time as your hotel's rule. Default Staying Days is 1 day. If your hotels' guest usually choose 2 days, please change it to '2'. It will makes your operating easily when issue card to guests.

3. When you finished the above click Save. Soft will off automatically. Re-start and login Hotel lock system.

4.  System setting > Register

5. A message comes warning you register ask read Authorized card and hotel code will be covered by the new hotel code which read from the Auhotrized card. It is for prevent user's mistake operate. For a new installed system, click 'OK' to go on.

6. There is a message comes asking you place an Authorized card.

7. Place an Authorized card onto the encoder and click 'OK'.

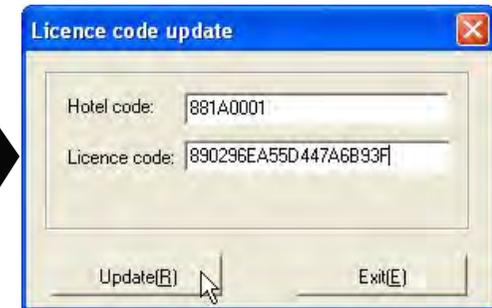

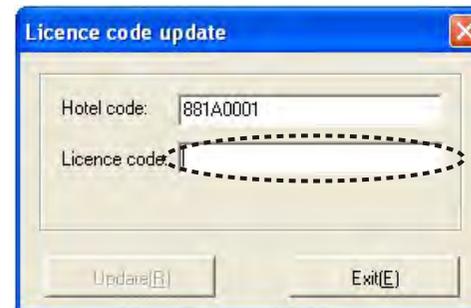

**Beep!**

8. Encoder beep once and there comes a window show the hotel code read from Authorized card.

It is '881A0001'.  
click 'OK' here.

9. Licence code update window jumped asking input licence code. Fill in the licence code given by us and click 'Update'.

10. Register successfully, click 'OK'. Soft will off automatically again. When next running it is a register version and you will see '[Registered]' on the head of the window of soft.

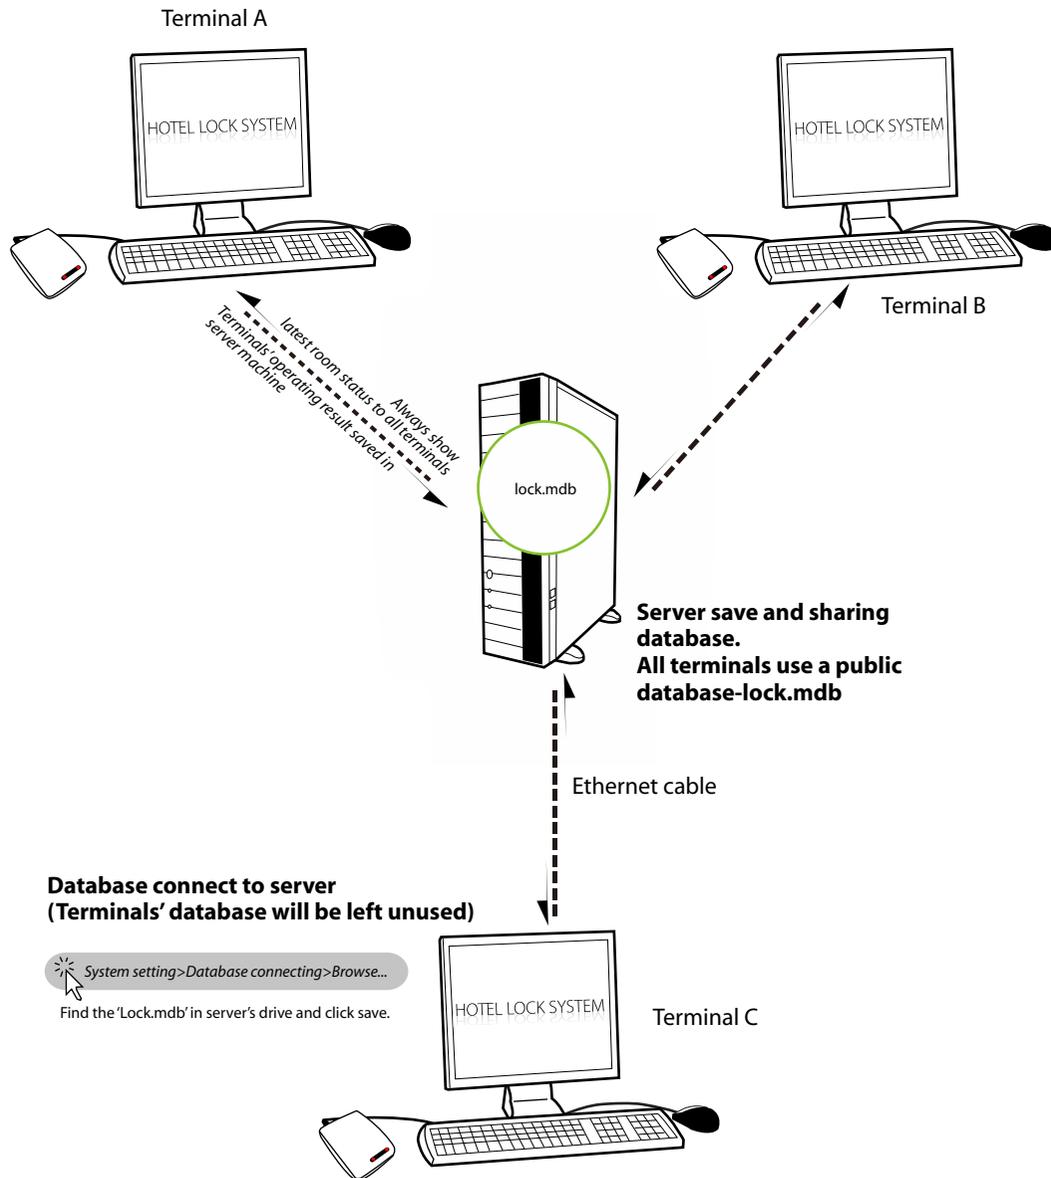

# Multi-terminal Connect

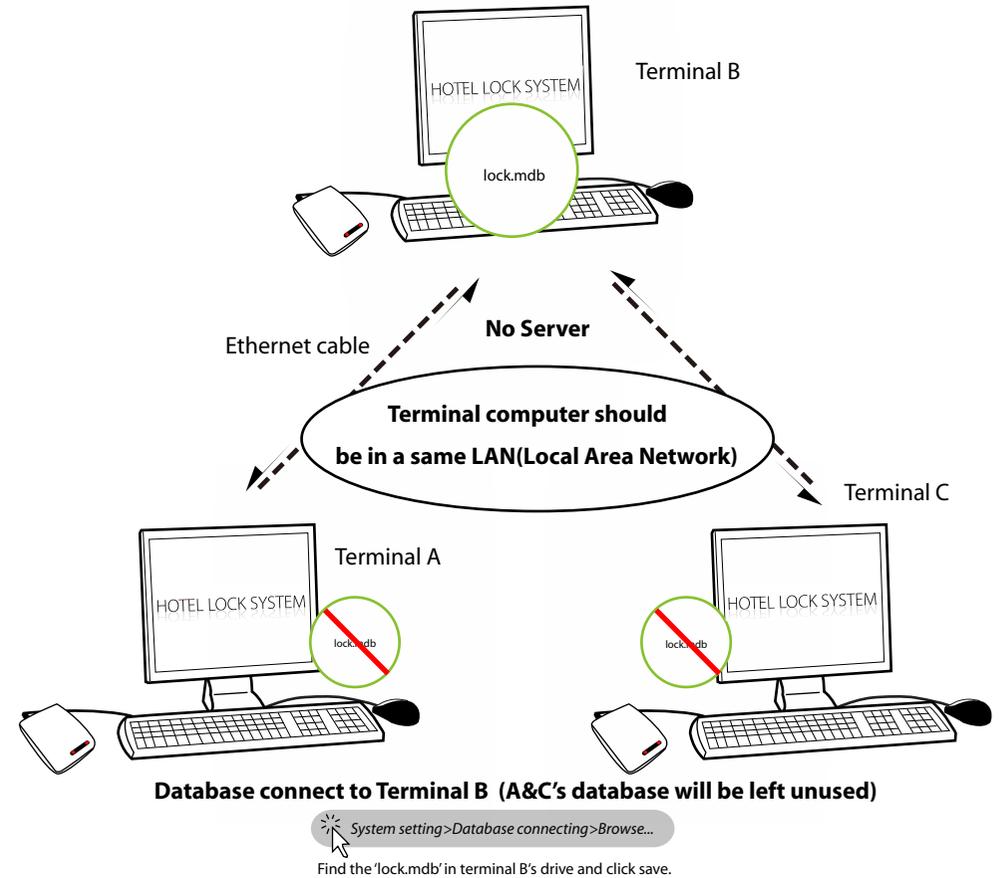

Server usually could offer a good performance in communication and has strong anti-virus ability. We suggest you connect terminals (if your hotel requires multi-terminals) in this mode.

Server is not required install Hotel Lock System. Just move file 'lock.mdb' to a safe drive of the server is OK. Terminals are required install Hotel Lock System by a same hotel code and should run at a same & correct time/date.

For database's safe we suggest you change Hotel Lock System's position to another drive but not the drive C (default). Initialize software in any terminal once is OK.

Select one terminal save and sharing database. Other terminals use this public database (lock.mdb)

In the case that there is no server, we suggest you select a stable and good anti-virus computer to save database file (lock.mdb). All terminals are required install Hotel Lock System.

To guarantee other terminals could save the operating result in database, you should keep the LAN in a smooth communication. The folder saves database must not be set 'Read-only' in properties.

For database's safe we suggest you change Hotel Lock System's position to another drive but not the drive C (default). Initialize software in any terminal once is OK.

# Light Guide

Card type Light after read	Guest card/ Floor card/Building card/ Area card	Master card	Passage/ Emergency card	Loss-report	Check out card	Data startup card	Setting card	Time card	Authorized card
	This card' chip is same as locks(RFID Mifare or IC) but comes from a different hotel code's Hotel Lock System								—
 + 	Dead bolt is on. Refuse card.	—	—	Recover (unvoided) the lost card OK!	—	—	—	—	Revoke initialization successfully.
 +  + 	Card's using term has not match(Card is in future's date or already expiry ) Or lock's clock is slow or lost.  Check card's begin and end time.If no problem please renew the lock's clock by reading a fresh Time card.							—	—
 +  +  + 	Card's Room No. /floor/building/Area is not match the lock's.	—	—	—	—	—	—	—	—
 +  +  +  + 	Lock was been report the loss or lock had been read Check out card.Card had been report lost and refused								Card's hotel code is not match the locks. Reset/initialize failed.
	Card read successfully and unlock able	Card read su ccessfully and unlock able	Card read successfully and passage mode on (Read again to off passage mode)	Report the lost card OK!	Force check out successfully	—	Set lock's Room(common door) ID successfully	Renew lock's clock(date and time) successfully	(Re)Initialize successfully.
 +  + <b>Beep! x3</b> + Any light	Battery power low.Lock still complete action it shoud do for the card. It remains 200 times before battery run out.								
 +  +  +  +  ...	—	—	—	—	—	send out audit trial start	—	—	—

Lock do checking between its memory and card contents in following order  
Hotel code(if it is in a same system)->Card type(what is this card and what should I do)->battery level(If battery low I should warning user)->Card Time(compare lock's date&time and card's time to check if card fall in a valid using term, not expiry or not in future)->  
Card been loss report or not->Room No./floor/Building/Area(compare it with lock's data)

In the above order,once lock find one condition not match,it will stop checking and give a related light signal.So the light can only indicate its own condition non-matched but not ensure other conditions are match or not.  
E.g. there is a guest card be flash 1blue + 2red.it means card is not in a valid term.But it don't stand for it been been loss report or not.If you re-issue it and get 1 blue+4red,you knows it also been loss report.
